impairment testing

carrying amount may not be recoverable.

Provisions

Provisions were raised and management determined an estimate based on the information available. Additional disclosure of these estimates of provisions are included in note 13 - Provisions.

Effective interest rate

The municipality used the prime interest rate to discount future cash flows.

1.3 investment property inhitial recognition

Investment property is recognised as an asset when, it is probable that the future economic benefits or service potential that are associated with the investment property will flow to the municipality, and the cost or fair value of the investment property will flow to the municipality, and the cost or fair value of the

Investment property is initially recognised at cost. Transaction costs are included in the Initial measurement.

Where investment property is acquired through a non-exchange transaction, its cost is its fair value as at the date of acquisition.

Fair value

Subsequent to initial measurement investment property is measured at fair value.

The fair value of investment property reflects market conditions at the reporting date.

A gain or loss arising from a change in fair value is included in net surplus or deficit for the period in which it arises.

If the entity determines that the fair value of an investment property under construction is not reliably determinable but expects the fair value of the property to be reliably measurable when construction is complete, it measures that investment property under construction at cost until either its fair value becomes reliably determinable or construction is not reliably determines that the fair value of an investment property (other than an investment property under construction) is not reliably determinable on a continuing basis, the entity measures that investment property under construction) is not reliably determinable on a continuing basis, the entity measures that investment property under construction). The residual investment property using the cost model (as per the accounting policy on Property, plant and equipment) until disposal of the investment property.

Once the entity becomes able to measure reliably the fair value of an investment property under construction that has previously been measured at cost, it measures that property at its fair value. Once construction of that property is complete, it is presumed that fair value can be measured reliably. If this is not the case, the property is accounted for using the cost model in accordance with the accounting policy on Property, plant and equipment.

Investment property is derecognised on disposal or when the investment property is permanently withdrawn from use and no future economic benefits or service potential are expected from its disposal.

### Accounting Policies

#### 1.3 Investment property (continued)

Gains or losses arising from the retirement or disposal of investment property is the difference between the net disposal proceeds and the carrying amount of the asset and is recognised in surplus or deficit in the period of retirement or disposal.

Compensation from third parties for investment property that was impaired, lost or given up is recognised in surplus or deficit when the compensation becomes receivable.

circumstances:
Property interests held under operating leases are classified and accounted for as investment property in the following

When classification is difficult, the criteria used to distinguish investment property from owner-occupied property and from property held for sale in the ordinary course of operations, are as follows:

1.4 Property, plant and equipment

Property, plant and equipment are tangible non-current assets (including infrastructure assets) that are held for use in

broduction or supply of goods or services, rental to others, or for administrative purposes, and are expected to be used during more than one year, items of property, plant and equipment are initially recorded at cost. The cost of an item of property, plant and equipment is the purchase price and other costs attributable to bring the asset to the location and condition necessary for it to be capable of operating in the manner intended by the municipality. Trade discounts and rebates are deducted in arriving at the cost. The cost also includes the necessary costs of dismantling and removing the asset and restoring the site on which it is located.

Where an asset is acquired by the municipality for no or nominal consideration (i.e. a non-exchange transaction), the cost is deemed to be equal to the fair value of that asset on the date acquired.

The Where an item of property, plant and equipment is acquired in exchange for a non-monetary asset or monetary assets, or a combination of monetary and non-monetary assets, the asset acquired is initially measured at fair value (the cost), if the acquired item's fair value was not determinable, it's deemed cost is the carrying amount of the asset's given up.

Major spare parts and servicing equipment qualify as property, plant and equipment when the municipality expects to use them during more than one period. Similarly, if the major spare parts and servicing equipment can be used only in connection with an item of property, plant and equipment.

Subsequent Measurement - Cost Model Subserty, plant and equipment are measured at cost less accumulated depreciation and impairment losses.

Land is not depreciated as it is deemed to have an indefinite useful life.

Where the municipality replaces parts of an asset, it derecognises the part of the asset being replaced and capitalises the newcomponent. Subsequent expenditure incurred on an asset is capitalised when it increases the capacity or future economic benefits associated with the asset.

Depreciation is calculated on the depreciable amount, using the straight-line method over the estimated useful lives of the

depreciated separately. The annual depreciation rates are based on the following estimated average asset lives.

The useful lives of items of property, plant and equipment have been assessed as follows:

Average useful life Indefinite 5 - 50 years 5 - 15 years 7 - 15 years 4 - 20 years 7 - 15 years 7 - 15 years 7 - 15 years 5 - 15 years 5 - 15 years

#### 1.5 Intangible assets

- An intangible asset is an identifiable non-monetary asset without physical substance. Examples include computer software, licenses, and development costs. The municipality recognises an intangible asset in its Statement of Financial Position only when it is probable that the expected future economic benefits or service potential that are attributable to the asset will flow to the municipality and the cost or fair value of the asset can be measured reliably.
- the municipality intends to complete the intengible asset for use or sale;
- it is technically feasible to complete the intangible asset;
- · the municipality has the resources to complete the project; and
- it is probable that the municipality will receive future economic benefits or service poten

#### Intangible assets are initially recognised at cost,

Where an intangible asset is acquired in exchange for a non-monetary asset or monetary assets, or a combination of monetary assets, the assets, the asset acquired is initially measured at fair value (the cost). If the acquired item's fair value was not determinable, it's deemed cost is the carrying amount of the asset's given up.

#### Subsequent Measurement - Cost Model

Intangible assets are subsequently carried at cost less accumulated amoritisation and impairments. The cost of an intangible asset is amortised over the useful life where that useful life is finite. Where the useful life is indefinite, the asset is

not amortised but is subject to an annual impairment

rasə)

#### Amortisation and impairment

Annortisation is charged so as to write off the cost or valuation of intangible assets over their estimated useful lives. the straightline method, the annual amortisation rates are based on the following estimated average asset lives.

The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at each reporting date and any changes are recognised as a change in accounting estimate in the Statement of Financial Performance.

The amortisation period and the amortisation method for intangible assets are reviewed at each reporting date.

The municipality tests intangible assets with finite useful lives for impairment where there is an indication that an asset may be impaired. An assessment of whether there is an indication of possible impaired. An assessment of an item of an intangible asset is greater than the estimated recoverable amount (or recoverable amount), it is written down immediately to its recoverable amount (or recoverable service amount) and an impairment loss is charged to the Statement of Financial Performance.

Identification

When the carrying amount of a non-cash-generating asset exceeds its recoverable service amount, it is impaired.

The municipality assesses at each reporting date whether there is any indication that a non-cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable service amount of the asset.

irrespective of whether there is any indication of impairment, the entity also test a non-cash-generating intangible asset with an indefinite useful life or a non-cash-generating intangible asset not yet available for use for impairment amount. This impairment test is performed at the same time every year, if an intangible asset was initially recognised during the current reporting period, that intangible asset was tested for impairment before the end of the current reporting period.

Value in use

Value in use of non-cash-generating assets is the present value of the non-cash-generating assets remaining service potential.

The present value of the remaining service potential of a non-cash-generating assets is determined using the following

Depreciated replacement cost approach

The present value of the remaining service potential of a non-cash-generating asset is determined as the depreciated replacement cost of the asset's gross service potential. The replacement cost of an asset may be replaced the asset. The reproduction This cost is depreciated to reflect the asset in its used condition. An asset may be replaced either through reproduction (replacement of its gross service potential. The depreciated replacement cost is measured as the reproduction or replacement cost of the asset, whichever is lower, less accumulated depreciation calculated as the reproduction or replacement cost of the asset.

The replacement cost and reproduction cost of an asset is determined on an "optimised" basis. The rationale is that the municipality would not replace or reproduce the asset with a like asset if the asset to be replaced or reproduced is an overdesigned assets contain features which are unnecessary for the goods or services the asset provides. Overdesigned assets that have a greater capacity than is necessary to meet the demand for goods or services the asset provides. The determination of the replacement cost or reproduction cost of an asset on an optimised basis thus reflects the service potential required of the asset.

Recognition and measurement

if the recoverable service amount of a non-cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable service amount. This reduction is an impairment loss.

An impairment loss is recognised immediately in surplus or deficit.

Any impairment loss of a revalued non-cash-generating asset is treated as a revaluation decrease.

When the amount estimated for an impairment loss is greater than the carrying amount of the non-cash-generating asset to which it relates, the municipality recognises a liability only to the extent that is a requirement in the Standards of GRAP.

After the recognition of an impairment loss, the depreciation (amortisation) charge for the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

The state of the s

1.00

Auditor General South Africa Mpumalanga Business Unit

## Thaba Chweu Local Municipality

(Registration number MP321)
Annual Financial Statements for the year ended 30 June 2015

## Notes to the Annual Financial Statements

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 17 (as revised 2012); Property, Plant and Equipment

Amendments were made to measurement at recognition, disposals and disclosure. Changes were made to ensure the consistent application of the principle where assets are acquired in exchange for non-monetary assets when the exchange transaction tacks commercial substance. Furthermore the requirement to disclose property, plant and equipment that were temporarily idle has been clarified.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

GRAP 27 and GRAP 31 (as revised 2012)

These Standards of GRAP replace the previous Standard of GRAP on Agriculture (GRAP 101) and Standard of GRAP on intangible Assets due to the International Public Sector Accounting Standards Board (IPSASB) that has issued an IPSAS on Agriculture (IPSAS S7) and Intangible Assets (IPSAS 31) respectively.

All amendments to be applied retrospectively.

The effective date of the amendment is for years beginning on or after 01 April 2013.

The municipality has adopted the amendment for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

IGRAP 1 (as revised 2012): Applying the Probability Test on initial Recognition of Revenue

This interpretation now addresses the manner in which the municipality applies the probability test on initial recognition of

роги

(a) exchange revenue (GRAP 9); and(b) non-exchange revenue (GRAP 23).

1/c~ (\$110) 2012121 251111272 11011 (d)

All amendments to be applied prospectively.

The effective date of the interpretation is for years beginning on or after 01 April 2013.

The municipality has adopted the interpretation for the first time in the 2014 annual financial statements.

The impact of the amendment is not material.

IGRAP 16: Intangible Assets - Website Costs

The interpretation deals with the treatment of the municipality's own website. It concludes that the municipality's own website that arises from development and is for internal or external access is an internally generated intangible asset that is subject to the requirements of the Standard of GRAP on Intangible Assets.

A website arising from development will be recognised as an intangible asset If, and only if, in addition to complying with the general requirements described in the Standard of GRAP on intangible Assets for recognition and initial measurement the municipality can satisfy the requirements in paragraph .54, which in particular requires the municipality to be able to demonstrate how its website will generate probable future economic benefits or service potential.

If the municipality is not able to demonstrate how a website developed solely and primarily for providing information

## Thaba Chweu Local Municipality

(Registration number MP321) Annual Financial Statements for the year ended 30 June 2015

# Notes to the Annual Financial Statements

effective date has yet been determined by the Minister of Finance.

The nunnicipality expects to adopt the standard once it becomes effective.

The impact of this amendment is currently being assessed.

GRAP 107: Mergers

The objective of this Standard of GRAP is to establish accounting principles for the combined municipality and combining municipalities in a merger.

A merger is where a new combined municipality, is started, no acquirer can be identified and the combining municipalities do not have any control over the municipality.

In the event of a merger, the assets and liabilities should be recognised (by the combined municipality) at their carrying amounts.

The difference between the carrying amounts of assets and liabilities should be recognised in accumulated surplus \ (deficit).

Specific disclosures are required when there is a merger.

No effective date has yet been determined by the Minister of Finance.

The municipality expects to adopt the standard once it becomes effective.

The impact of this standard is currently being assessed. GRAP 32: Service Concession Arrangements: Grantor

The standard applies to a contractual arrangement between a grantor and an operator in which the operator uses the service concession asset to provide a mandated function on behalf of the grantor for a specified period of time. The operator providing the mandated function on behalf of the grantor can either be a private party or another public sector entity. The standard applies to the grantor only.

PPP agreements that are governed and regulated in terms of the PFMA and MFMA, are some of the arrangements that fall within the scope of GRAP 32. For any other arrangements that meet the control criteria as set out in paragraph .07 of GRAP 32 the principles in the standard on accounting for such arrangements will apply.

An asset provided by the operator, or an upgrade to an existing asset, is recognised as a service concession asset with a corresponding liability, being the performance obligation, if certain criteria and conditions are met.

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

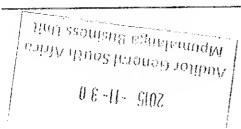

The municipality expects to adopt the standard for the first time once it becomes effective. It is unlikely that the standard will have a material impact on the municipality's annual financial statements.

GRAP 108: Statutory Receivables

GRAP 108 only deals with those receivables that arise from legislation or an equivalent means, such as regulations, bylaws or other documents issued in terms of legislation, such as ministerial orders and cabinet or municipal council decisions. Therefore in order to be statutory in nature specific legislation should require the municipality to undertake the transactions, such as outlining who should be taxed and at what rates and amounts.

Statutory receivables are not contractual receivables, the latter of which would normally meet the definition of a financial asset and will be within the scope of the Standard of GRAP on Financial instruments. Statutory receivables are not voluntarily entered into as with contractual receivables because they arise as a result of specific legislative requirements.

Statutory receivables are initially measured at their transaction amount and subsequently using the cost method.

11:

## Thaba Chweu Local Municipality

(Registration number MP321)
Annual Financial Statements for the year ended 30 June 2015

## Notes to the Annual Financial Statements

Under the cost method, the initial measurement of the receivable is changed subsequent to initial recognition to reflect any:

- interest or other charges that may have accrued on the receivable (where applicable);
- Impairment losses; and
- amounts derecognised.

The standard has been approved by the Accounting Standards Board but its effective date has not yet been determined

The municipality expects to adopt the standard for the first time once it becomes effective.

It is unlikely that the standard will have a material impact on the municipality's annual financial statements.

IGRAP 17; Service Concession Arrangements where a Grantor Controls a Significant Residual Interest in an Asset

This interpretation provides guidance to the grantor where it has entered into a service concession arrangement, but only controls, through ownership, beneficial entitlement or otherwise, a significant residual interest in a service concession asset at the end of the arrangement, where the arrangement does not constitute a lease.

A service concession arrangement is a contractual arrangement between a grantor and an operator in which the operator uses the service concession asset to provide a mandated function on behalf of the grantor for a specified period of time.

The operator is compensated for its services over the period of the service concession arrangement, either through payments, or through receiving a right to earn revenue from third party users of the service concession asset, or the operator is given access to another revenue-generating asset of the grantor for its use.

Before the grantor can recognise a service concession asset in accordance with the Standard of GRAP on Service Concession Arrangements: Grantor, both the criteria as noted in paragraph .01 of this interpretation need to be met. In some service concession arrangements, the grantor only controls the residual interest in the service concession asset at the end of the arrangement, and can therefore not recognise the service concession asset in terms of the Standard of GRAP on Service Concession Arrangements: Grantor.

This interpretation concludes on the recognition of the performance obligation and the right to receive a significant interest in a service concession asset.

The interpretation has been approved by the Accounting Standards Board but its effective date has not yet been determined by the Minister of Finance.

The municipality expects to adopt the interpretation for the first time once it becomes effective.

It is unlikely that the interpretation will have a material impact on the municipalitys annual financial statements.

GRAP 5 (revised 2013): Borrowing Costs

Benchmark treatment is to recognise borrowing costs as an expense.

Alllowed alternative is to capitalise borrowing costs if it is attributable to the acquisition, construction or production of a qualifying asset. All other instances, expense borrowing costs.

All amendments to be applied prospectively.

The effective date of the amendment is for years beginning on or after O1 April 2014.

The municipality expects to adopt the amendment for the first time in the 2015 annual financial statements.

It is unlikely that the amendment will have a material impact on the municipality's annual financial statements.

GRAP 100 (revised 2013): Discontinued Operations

All accounting, presentation and disclosure requirements with regards to non-current assets held for sale (or disposal groups) have been deleted. The impact of the amendments is:

## Thaba Chweu Local Municipality

(Registration number MP321)

(kegistration number which)
Annual Financial Statements for the year ended 30 June 2015

## Notes to the Annual Financial Statements

- Will no longer be required to reclassify assets as held for sale. GRAP 100 now only deals with discontinued

operations.

- Certain disclosure must be made if, at the reporting date, managenient has taken a decision to dispose of a significant asset or a group of assets and liabilities. Will fall under the Standard of GRAP on Presentation of

Financial 5tatements.

Measurement requirements are to be applied prospectively and presentation and disclosure requirements are to be applied retrospectively.

The effective date of the amendment is for years beginning on or after 01 April 2014.

The municipality expects to adopt the amendment for the first time in the 2015 annual financial statements.

It is unlikely that the interpretation will have a material impact on the municipality's annual financial statements.

2,3 Standards and interpretations not yet effective or relevant

The following standards and interpretations have been published and are mandatory for the municipality's accounting. The following standards and interpretations:

GRAP 18: Segment Reporting

Segments are identified by the way in which information is reported to management, both for purposes of assessing performance and making decisions about how future resources will be allocated to the various activities undertaken by the municipality. The major classifications of activities identified in budget documentation will usually reflect the segments for which an entity reports information to management.

Segment information is either presented based on service or geographical segments. Service segments relate to a distinguishable component of an entity that provides specific outputs or achieves particular operating objectives that are in line with the municipality's overall mission. Geographical segments relate to specific outputs generated, or particular objectives achieved, by an entity within a particular region.

The standard has been approved by the Board but its effective date has not yet been determined by the Minister of

The municipality expects to adopt the standard for the first time once it becomes effective.

The adoption of this standard is not expected to impact on the results of the municipality, but may result in more disclosure than is currently provided in the annual financial statements.

Notes to the Annual Financial Statements

Figures in Rand

Credit risk

Credit risk consists mainly of cash deposits, cash equivalents, and trade debtors. The municipality only deposits cash with major banks with high quality credit standing and limits exposure to any one counter-party.

Trade receivables comprise a widespread customer base. Management evaluated credit risk relating to customers on an ongoing basis. If customers are independently rated, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the credit quality of the customer, taking into account its financial position, past experience and other factors.

39, Going concern

The annual financial statements have been prepared on the basis of accounting policies applicable to a going concern. This basis presumes that tunds will be available to finance future operations and that the realisation of assets and settlement of liabilities, contingent obligations and commitments will occur in the ordinary course of business.
